

Reuse & Recycle

From the 1980, the production of packaging and disposable products has increased significantly, as well as waste production, especially in developed countries

**the recycling process, also generates wealth, the most recycled materials are glass, aluminum, paper and plastic. This recycling contributes to a significant reduction of the pollution of soil, water and air. Many industries are recycling materials as a means to reduce production costs.**

# PAPER

**all types of paper are recyclable, including boxes of long-life type and cardboard. Do not recycle paper with organic material such as pizza boxes full of fat, cigarette butts, tapes, photographs, tissue paper and carbon paper.**

The background of the slide features three clear plastic bottles of varying sizes, arranged in a row from left to right. The bottles are slightly out of focus, emphasizing the text overlay. The largest bottle is on the left, a medium-sized one in the center, and a smaller one on the right. All bottles have white caps.

# PLASTIC

90% of the waste produced in the world are from plastic. This material deserves special attention. Recycle grocery bags, soda bottles (pet), caps and even broken toys.

# GLASS

when clean and dry, all are recyclable, except lamps, mirrors, car windows or tempered, pottery and porcelain.

# METALS

**In addition to all kinds of aluminum cans, you can recycle bottle caps, nails and screws.  
Warning: clips, clamps, pipes and steel sponges should stay out.**

# **styrofoam**

**contrary to what many people think, the Styrofoam is recyclable. However, this process is not economically viable. So it is important to use styrofoam in various ways and avoid the most of your waste. When you have to throw away, put the can of plastics. Some companies turn into raw material for building blocks**

# **curiosities**

**1-The recycling of a single aluminum can save enough to maintain a connected TV power for three hours.**

**2-About 100 thousand people live in Brazil exclusively to collect aluminum cans and receive an average of three monthly minimum wages, according to the Brazilian Aluminum Association.**

ONE TON OF RECYCLED PAPER  
SAVES 10 THOUSAND LITERS OF  
WATER AND PREVENTS THE  
CUT FROM 17 ADULT TREES.

**100 tonnes of recycled  
plastic saves 1 ton of oil**
