

Recycling Project

“A better ambient, a better life”.

- What do you know about recycling?

It's a very important thing to us, and our world. Recycling get used material to produce new things.

- What happens to your garbage?

Plastic: when we throw plastic on the trash, garbage trucks take it to the factory, where it is recycled.

Metal: When dropped, the truck gets the garbage, and the metal passes through a recycling process that recycles recycled metal.

Paper: When thrown in the trash, it pass through a recycling process in factories.

Why is it important to recycle?

**To re-enjoy useful
material and don't
pollute the world.**

Why should we recycle plastic, metal and paper?

This will save natural resources and also save places in landfills. Recycling can reduce the pollution of air and water. It can also save energy.

What usually happens to paper,
metal and plastic?

What can it become when it is recycled?

Paper: Turn into recycled paper

Metal: Usually turn into cans

Plastic: Supermarket bags, PET bottles and more

Bring an example of a recycled material made of it.
