

Recycling

What is recycling?

Recycle means transforming objects used materials into new products for consumption.

International
Symbol for recycling

Advantages of recycling

In recycling, in addition to preserving the environment generates many riches also. The Contaning by more recycled are, glass, aluminum, paper and plastic. This recycling helps against the pollution of soil, water and air. The organic waste is used in the manufacture of organic fertilizer to be used in agriculture.

Examples of Recyclable Products

- Glass: food pots (olives, corn, cottage cheese, etc), bottles, flasks of medicines, shards of glass.
- Paper: newspapers, magazines, brochures, cardboard boxes, paper packaging.
- Metal: aluminum cans, steel cans, nails, lids, pipes of folder, copper, aluminum.
- Plastic: plastic pots, PET bottles, bags plastics, packaging and grocery bags.

Recycle you too! We are going to help the environment and reduce pollution! Because each aid is very important! It does not cost anything buy a trash organismic and another common. If you help our planet were ever better!

Spongebob is already helping and everyone also! Os missing you!

Project Reycling
